This lift is designed to overcome the problem of a single step for wheelchair users, in the home or in public spaces.

It is mounted in a pit in front of the step so that when the lift is down and not being used, it can be walked across and does not cause an obstruction within the space.

Being able to be installed indoors or outdoors, it can be covered in any floor material so that it can blend into the surrounding area: tiles, carpet, stone slabs, even artificial grass can be used!

Panova Short rise Cantilevered Step Lift
